

Optimizing Marketing Strategies – Improving Operational Efficiency and Revenue generation

Case Study Group: Ankit Mathur, Lakshmi Sagar, Rakesh Kumar Sahoo, Rohit Vashishth

Group Name: ALRR0625

Agenda

- 1 Objective & Goals
- 2 Findings
- 3 Background
- 4 Insights and Recommendations
- 5 Recommendations
- 6 Appendix

Overview & Objectives

Business Overview

Namma Yatri plays a pivotal role in Bengaluru's urban transport network. Operating in a dynamic environment, the company must continuously adapt to shifting demand patterns, optimize ride allocation, and maintain profitability — all while delivering a superior customer experience. To support this, Namma Yatri aims to deepen its understanding of ride patterns, customer behavior, and operational bottlenecks.

Objectives

The objective is to uncover insights that can guide decisions to improve service efficiency, maximize revenue, and enhance customer satisfaction through:

- ❑ Identifying peak demand patterns and trends
- ❑ Uncovering factors influencing cancellations and driver performance
- ❑ Optimizing payment methods and trip durations
- ❑ Improving resource allocation and marketing strategies

Background – Initial observations

Background

- ❑ Peak demand patterns and trends – Afternoon and Forenoon
- ❑ Cancellation rate stands at 23%
- ❑ Driver performance – 88%
- ❑ Payment method – Digital payments 74%
- ❑ Low Conversion rate – 45%

42% of revenue is generated during business hours

Insights

- ❑ Maximum trips & revenue are between **7 AM to 5 PM**
- ❑ Time slot Midnight to **1 AM** has the highest hourly revenue – **45K**
- ❑ Bottom 5 pickup zones contribute only **9.3% (69.5K)** of total revenue

33% of our drivers are performing below average

Insights

- ❑ Average Revenue per driver – **3.3% (25K)**
- ❑ Drivers below average revenue – **33% (10)**
- ❑ Top 3 drivers – 12, 8 and 21
- ❑ Bottom 3 drivers – 18, 23 and 11

Nearly half of the locations exceed the average cancellation rate

Insights

46% (17) of locations have cancellation rate above average (**23%**). Following locations show a trend of low Driver performance (more cancellations from Drivers) because of low Fair per KM w.r.t. high distance:

- ❑ Anekal – 42.4%
- ❑ C V Raman Nagar – 38.2%
- ❑ Yelahanka – 32.6%
- ❑ Shanti Nagar – 26.7%
- ❑ Vijayanagar – 25.7%
- ❑ Channapatna – 25%

Cancellation rate Vs Other Matrix - ALRR0625						
Assembly	Drivers allotted Trips	Total Cancellations	Trip Cancellation Percent	Trip Rate	Driver Performance	Average of distance
Anekal	33	14	42.4%	34.91	70.4%	17.07
Mahadevapura	43	17	39.5%	59.57	70.3%	13.89
C. V. Raman Nagar	34	13	38.2%	42.57	87.5%	15.71
Doddaballapur	27	10	37.0%	58.98	85.0%	13.59
Yelahanka	43	14	32.6%	50.19	82.9%	15.47
Mahalakshmi Layout	32	10	31.3%	50.10	81.5%	14.12
Pulakeshinagar	30	9	30.0%	60.42	80.8%	12.44
Byatarayanapura	27	8	29.6%	52.24	86.4%	13.24
Hebbal	43	12	27.9%	58.19	86.1%	13.71
Magadi	30	8	26.7%	73.87	78.6%	12.83
Shanti Nagar	30	8	26.7%	50.01	84.6%	15.45
Vijay Nagar	35	9	25.7%	46.10	86.7%	15.94
Channapatna	40	10	25.0%	46.43	88.2%	16.13
Govindraj Nagar	40	10	25.0%	51.01	85.7%	13.61
Kanakapura	36	9	25.0%	49.34	84.4%	14.00
Bangalore South	43	10	23.3%	70.45	86.8%	10.81
Other Assemblies	39	9	23.1%	71.83	90.9%	13.58
Shivajinagar	35	8	22.9%	54.99	93.1%	15.05
Nelamangala	22	5	22.7%	56.50	89.5%	14.76
Devanahalli	31	7	22.6%	52.24	85.7%	15.24
Jayanagar	40	9	22.5%	50.74	96.9%	15.52
Sarvagnanagar	32	7	21.9%	47.59	96.2%	15.45
Bommanahalli	37	8	21.6%	50.25	87.9%	16.00
B. T. M. Layout	33	7	21.2%	50.02	89.7%	12.66
Gandhi Nagar	40	8	20.0%	43.89	86.5%	15.30
Padmanabhanagar	32	6	18.8%	59.31	86.7%	16.14
Basavanagudi	34	6	17.6%	66.29	90.3%	11.32
Chickpet	34	6	17.6%	53.43	90.3%	14.64
Krishnarajapuram	29	5	17.2%	52.94	85.7%	14.31
Dasarahalli	39	6	15.4%	50.87	94.3%	13.74
Ramanagaram	46	7	15.2%	61.87	92.9%	13.69
Hoskote	28	4	14.3%	63.25	88.9%	12.05
Malleshwaram	30	3	10.0%	45.96	93.1%	14.05
Yeshwantpur	40	4	10.0%	56.32	92.3%	12.80
Rajaji Nagar	21	2	9.5%	56.20	100.0%	14.46
Chamrajpet	34	3	8.8%	52.43	96.9%	16.22
Rajarajeshwarinagar	35	3	8.6%	44.09	94.1%	15.04
Total	1277	294	23.0%	53.11	87.8%	14.39

Encourage customers to opt for Digital payment methods

Insights

Digital transactions – **76%** (Credit Card > Debit Card > UPI) outperformed Cash transactions – **24%**.

Insights

Unusual revenue distribution — **185.1K of revenue** for **235 rides** suggests that while fewer customers use cash, their trips tend to be high-value rides

Recommendations

❑ Revenue generation

- ❑ Offer targeted discounts or cashbacks for rides during Early Morning, Evening, Night, and Midnight windows.
- ❑ Time slots between 4 PM and 8 PM show higher average fares but generate relatively lower revenue indicating underutilization from both operational and marketing standpoints

❑ Drivers' performance

- ❑ Driver incentivization program to improve performance

❑ Rides cancellation

- ❑ Addressing driver and customer cancellations can improve ride completion to 59%.

❑ Payment methods

- ❑ Encourage Digital Alternatives for High-Value Rides- Offering exclusive discounts or smoother checkout for high-value transactions on Digital payment methods

❑ Ride conversion rate

- ❑ Reducing wait-times by better driver allocation can further improve the completion rate to 67%
- ❑ Experiment with A/B tests for ride suggestion algorithms and booking flows to increase conversions to 80%

Appendix – Revenue Optimization

Late night and early morning rides had higher average fares due to longer trips or surge pricing. Revenue spikes are observed at non-linear intervals, such as:

- ❑ Midnight (0–1 AM)
- ❑ Morning (6–7 AM)
- ❑ Late evening (10–11 PM)

This implies that ride fare is driven more by specific travel behaviors (e.g., airport transfers, commuting patterns, late-night surges) rather than just the hour of the day. Refer figure-6

Appendix – Location Vs. Duration (Trip optimization)

The heatmap above displays trip volume by pickup zone (rows) and time slot (columns).

- ❑ Green shades represent higher numbers of rides and Red shades represent zero or less numbers of rides. Amber is moderate number of rides.
- ❑ Peak ride periods differ by zone. Resource allocation can be optimized by mapping peak hours with zones.
